

EcoShield specialise in the development and manufacture of innovative, high-quality floor coatings, concrete sealers and polishing liquids that consistently deliver superior results. We're committed to health and safety, which is why our concrete and paver products are environmentally friendly and non-toxic.

We offer a full range of coatings, sealers, and consumables, designed for residential, commercial, and industrial use.

If you need advice on product selection or application, our team is always available to share their expertise, ensuring you're more than satisfied with the results.

INVISIBLE PENETRATING SEALER

Eco Pave Seal is an environmentally friendly, water-based invisible repellent and sealer for masonry building products. It provides powerful protection against stains from water, oil, food, wine, and tannin, without altering the natural appearance or slip resistance of your floor.

As the popularity of coloured masonry and natural stone pavers grows, so does the need to protect these surfaces while preserving their aesthetic appeal. Eco Pave Seal addresses this need by penetrating deep into the material, where a silicone barrier lines the pores. This protective layer effectively repels stains and moisture while remaining completely invisible and allowing the surface to breathe.

ADVANTAGES OF OUR INVISIBLE SEALER

- Fast beading action for excellent water repellence
- Longer lasting protection than conventional sealers
- Efflorescence resistant to protect against spalling and eroding
- Chemical and water resistant to seal the surface
- Virtually odourless and friendly to the environment
- Ready to use from the container, easy to apply and fast drying
