

Ecoshield is an Australian owned business that develops and manufactures innovative, top quality liquid flooring technology. We place a strong emphasis on health and safety, which is why our timber products are environmentally friendly and non-toxic.

Ecoshield's mission is to bring quality to the marketplace with our range of non-toxic timber floor finishes, maintenance and floor care products, along with the best knowledge and technical advice. Ecoshield professionals are always available to share our expertise to ensure you are more than satisfied with the results.

Our range of products have been developed for the residential, commercial and industrial marketplace.

## WHY CHOOSE WATER-BASED

The major difference between toxic solvent based coatings and non-toxic water-based coatings is the amount of Volatile Organic Compounds (VOC's) that evaporate as the finish dries.

As a Polyurethane coating dries, the toxic solvent evaporates into the air, however when a water-based coating dries, only water evaporates, making this a much safer option.

Low VOC's means with Ecoshield products there is no need to vacate premises during application due to solvent fumes and no concern about the health effects of toxic chemicals.

## LATEST TECHNOLOGY

Ecoshield products are at the forefront of science in liquid flooring technology. We use the highest quality raw materials from across the globe to formulate market leading floor coating systems.

Our Carbon Coat is the world's first water-based Polycarbonate coating. Polycarbonate is used to make bullet proof glass and aircraft windshields due to its clarity and extreme durability.

Carbon Coat is the most scratch resistant water-based clear coat available on the market. We have also developed a hardener that is completely non-toxic with zero odour. Most other 2-pack additives on the market contain isocyanates, which pose a serious health risk, but our Diamond Link Hardener is completely isocyanate free.
